# “Not Invented Here” syndrome

Digital nationalism

“Frameworks save time.”

How this gets reinforced:

# Social pressure

“Rails is omakase. Do it my way.”

“Just install x”

# Client pressure

“Isn’t there something for *y* already?”

# You pressure

“I don’t have (time|skill|energy|capacity) to build *z*”

(bullshit)

“

You're more inclined to  
use a tool when you don't  
understand what it's  
doing.

- the brilliant Micah Cooper

This creates more than just  
dependency complexity

# Frameworks can take from you:

I. Money

II. Energy

III. Control

IV. Performance

V. Reputation

VI. Stability

VII. Dignity

# I. Money

and its best friend: time

## THE PROBLEM

“I need an MVP in a week”

THE NIH SOLUTION  
gem “devise”

# The NIH Result

```
1 require 'devise стратегии/authenticatable'
2
3 module Devise
4   module Strategies
5     class MultiTenant < Authenticatable
6       def valid?
7         true
8       end
9
10      def authenticate!
11        if params[:user]
12          user = Thread.current[:subdomain].users.find_by_email(params[:user][:email])
13
14          if user && user.encrypted_password == params[:user][:password]
15            success!(user)
16          else
17            fail
18          end
19        else
20          fail
21        end
22      end
23    end
24  end
25 end
```

# The NIH Result (continued)

```
27 Warden::Strategies.add(:multi_tenant,  
  Devise::Strategies::MultiTenant)  
28  
29 config.warden do |manager|  
30   manager.default_strategies(:scope => :user).unshift :multi_tenant  
31 end
```

# The NIH Result (continued)

```
1 class ApplicationController < ActionController::Base
2   before_filter :set_current_subdomain
3
4   private
5   def current_subdomain
6     return @subdomain if defined? @subdomain
7     @subdomain = Subdomain.find_by_name(request.subdomain)
8   end
9   helper_method :current_subdomain
10
11  def set_current_subdomain
12    unless Thread.current[:subdomain] = current_subdomain
13      deny!(404)
14    end
15  end
16 end
```

# The AIH Solution

```
1 class SessionsController < ApplicationController
2   def create
3     if user = subdomain.users.authenticate(params[ :email ], params[ :password ] )
4       session[ :user_token ] = user.generate_token
5     end
6   end
7 end

1 class User < ActiveRecord::Base
2   def self.authenticate(email, password)
3     if user = where(email: email).first
4       return user if user.authenticates_with?(password)
5     end
6   end
7
8   def authenticates_with?(check_password)
9     BCrypt::Password.new(encrypted_password) == check_password
10  end
11 end
```

## THE AIH RESULT

You know exactly what's happening  
when a user authenticates and  
where to change it

## II. Energy

and its worst enemy: frustration

## THE PROBLEM

“I have to communicate with  
a SOAP service using signed  
requests.”

THE NIH SOLUTION

**gem “savon”**

THE NIH RESULT

Forking the gem to access its  
private API

THE NIH RESULT

Send maintainer pull requests

THE NIH RESULT

Potentially (but not definitely)  
be told to screw off

THE AIH SOLUTION

Wasabi for WSDL parsing  
Nokogiri for request building  
OpenSSL for request signing

## THE AIH RESULT

Understand message signing  
*and* absolute control over  
your requests\*

\* with 3 hours of work!

## III. Control

A true craftsman cares about details

## THE PROBLEM

“I need my app to be responsive.”

THE NIH SOLUTION

gem "twitter-bootstrap-rails"

# Before Bootstrap

```
rorschach:woman$ time rake assets:precompile  
  
real 0m21.535s  
user 0m16.409s

user 19m12.870s  
sys 1m33.776s
```

# V. Reputation

Their bugs? Those are your bugs, now.

**Security announcement: Devise v2.2.3, v2.1.3, v2.0.5 and v1.5.4 released** 28 Jan

By José Valim

Hi everybody.

I'd like to announce that Devise v2.2.3, v2.1.3, v2.0.5 and v1.5.4 have been released with a security patch. **Upgrade immediately** unless you are using PostgreSQL or SQLite3. Users of all other databases (including NoSQL ones) require immediate upgrade.

Using a specially crafted request, an attacker could trick the database type conversion code to return incorrect records. For some token values this could allow an attacker to bypass the proper checks and gain control of other accounts.

In case you are using a Devise series older than the ones listed above, recommendations are provided below back to v1.2 series. Regardless, an upgrade to more recent versions is advised.

**Versions affected**

We checked all Devise versions released in the previous two years and recommendations follows as below.

**v1.5, v2.0, v2.1 and v2.2 series**

You can upgrade to any of v2.2.3, v2.1.3, v2.0.5 and v1.5.4. In case an upgrade is not feasible, please add the following patch to config/initializers/devise\_patch.rb inside your Rails application:

```
Devise::ParamFilter.class_eval do
  def param_requires_string_conversion?(_value); true; end
end
```

**v1.4 series**

Please add the following patch to config/initializers/devise\_patch.rb inside your Rails application:

```
Devise::Models::Authenticatable::ClassMethods.class_eval do
  def auth_param_requires_string_conversion?(value); true; end
end
```

Please upgrade to more recent versions.

**v1.2 and v1.3 series**

Not affected by this vulnerability. Please upgrade to more recent versions.

**Upgrade notice**

When upgrading to any of v2.2.3, v2.1.3, v2.0.5 and v1.5.4, some people may be relying on some wrong behaviour to filter data retrieved on authentication. For example, one may have written in his model:

```
def find_for_authentication(conditions)
  conditions[:active] = true
  super
end
```

The code above may no longer work and needs to be rewritten as:

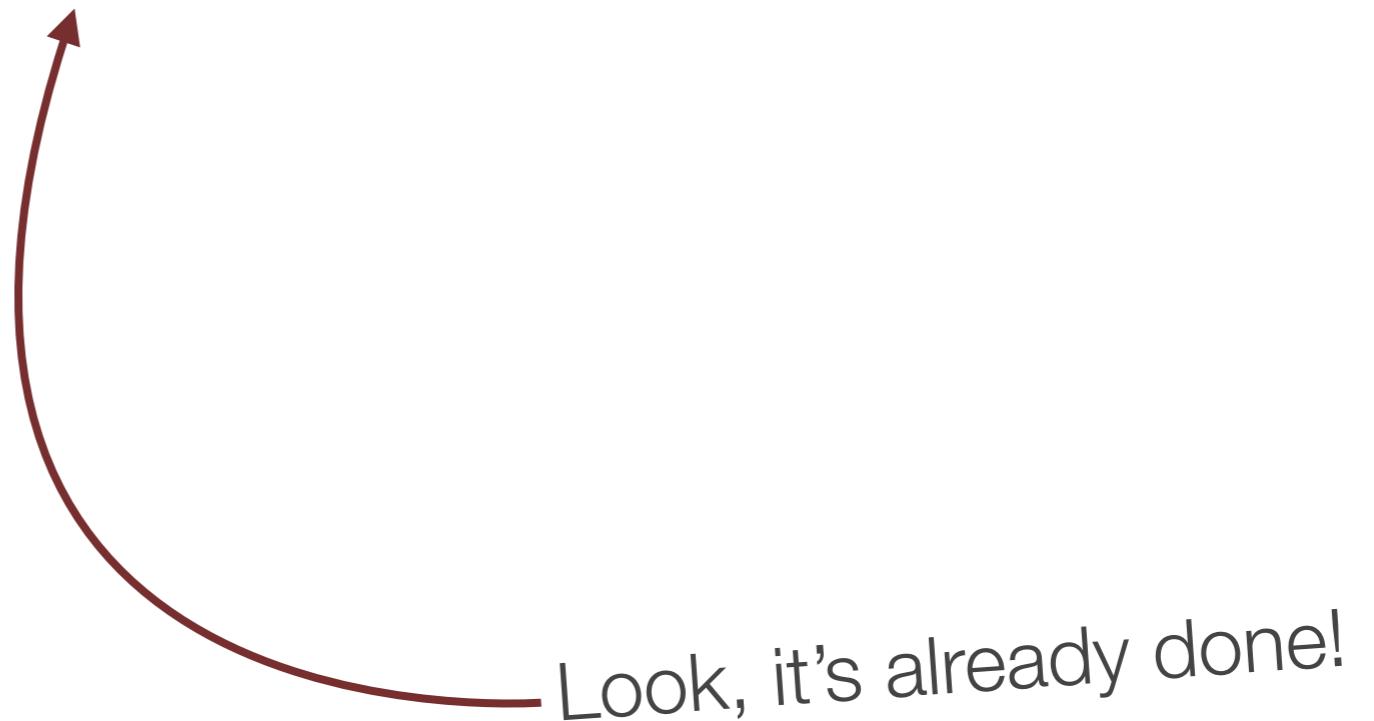

```
def find_for_authentication(conditions)
  find_first_by_auth_conditions(conditions, active: true)
```

# The Problem

## THE NIH SOLUTION

```
gem "devise", ">= 2.2.3"
  bundle update
    rspec spec/
    cucumber features/
git commit Gemfile* -m "Updating w/Devise security patch"
  heroku maintenance:on
  git push heroku master
  heroku maintenance:off
  heroku open
```

## THE AIH SOLUTION

Look, it's already done!

## VI. Stability

You don't let one client represent 80% of your revenue  
Why would you let one library affect 80% of your code?

THE NIH SOLUTION: PAYMENTS

activemerchant >

braintree > stripe

# The AIH Solution

```
1 class PayLeap
2   include HTTParty
3
4   class << self
5     def configuration
6       @configuration ||= YAML.load(Rails.root.join('config', 'gateway.yml'))
7     end
8   end
9
10  base_uri configuration && configuration['service']
11  default_timeout 2
12
13  def request(endpoint, query = {})
14    query.merge!(
15      Password: configuration[:transaction_key],
16      UserName: configuration[:user]
17    )
18    request = get("/#{endpoint}", :query => query)
19    if request.parsed_response
20      Response.new(request.parsed_response)
21    else
22      Response.new(:request => request, :gateway_failed => true)
23    end
24  rescue Errno::ECONNREFUSED, SocketError
25    Response.new(:gateway_failed => true)
26  end
27 end
```

## THE NIH SOLUTION: BACKGROUND JOBS

**spawn > backgroundrb >  
beanstalkd > delayed\_job  
> resque > sidekiq**

## THE NIH SOLUTION: PAGINATION

pagination >

will\_paginate >

kaminari

## THE AIH SOLUTION

Mitigate risk with an API over  
an API, or your own library

## VII. Dignity

You're a programmer

You're not gluing together a model airplane

You're building software

THE NIH SOLUTION

gem install everything

Beautifully clean solutions

# Whither the poetry?

Tumbling-hair

picker of buttercups

violets

dandelions

And the big bullying daisies

through the field wonderful

with eyes a little sorry

Another comes

also picking flowers

“Tumbling-Hair”  
by E. E. Cummings

# Thither!

```
1 class TumblingHair:  
2     def picks(self, flower_type):  
3         return flower_type in [ 'buttercups' ,  
'violets' , 'dandelions' ]  
4  
5 class Flower:  
6     def bullies(self):  
7         return self == 'daisies'  
8  
9 class Field:  
10    def eyes(self):  
11        return "; ("  
12  
13    def pickers(self):  
14        return [ TumblingHair( ) ]
```

I'm not saying reinvent  
everything

I'm saying we should do it more than we are now

# Navigating the gray area

Using Rails:  
Good Idea™

**Gray Area!**

Using Devise:  
Bad Idea™

# Rule #1: Know why

You have to do this to understand your app

# Rule #2: Learn from OSS

Don't use it without knowing what it does

# Rule #3: Timeboxing

Don't let it play hungry hungry hippos with your time

# Rule #4: Make it pretty

APIs to APIs create flexibility

# **Conclusions**

Value != install count

The world needs alternatives,  
and you can do anything with  
Ruby.

\* except subclass Fixnum

You are smarter than the  
mob.

\* sometimes

Thnaks!
